SERIAL NO. 09/544,992   **PATENT**
                                                Docket RAL919990140US1

Amendments to the Specification:

Amend page 38, paragraph beginning at line 9 as follows:

An example of the use of an 8 entry DT 108 is shown in Fig. 5 [[6]]. It can be seen that the search time, i.e., the number of PSCBs that must be accessed, can be reduced by using a DT 108.   Thus, by increasing the DT size, a trade-off can be made between memory usage and search performance.
